- Small Size – 2"x 2" x 15/16"
- Lightweight – approximately 2.5 oz.
- Rugged
- Transient Protected to 6000V
- Choice of 5, 10, 15 Amp. Load Rating

A solid state switch turns the load ON at the end of the preset timed period and remains in this condition until power is removed. Power to the timer must be applied continuously throughout the timing period. Removal or interruption of power causes the timer to reset. Circuit design is such that interruption of power during timing will not cause momentary activation of the load.

Control the timing of high power electric heaters, motors, lamps, transformers and other high current loads rated less than 15 amps (150 amps inrush). CMOS digital circuitry is combined with a high current solid state switch. P/C board and internal components are encapsulated in a flame retardant molded housing, fitted with quick connect wiring terminals. Available in all standard voltages and frequencies. Fixed or adjustable timing from .1 seconds to 24 hours.
