

### UNIVERSAL TIMER MODULE

Using Flexibility and Programmability in your timing applications

The PT-1100 is a smart timer which can be programmed using your personal computer through a USB interface. This programmability allows the timer to be configured as any of the following timing modes:

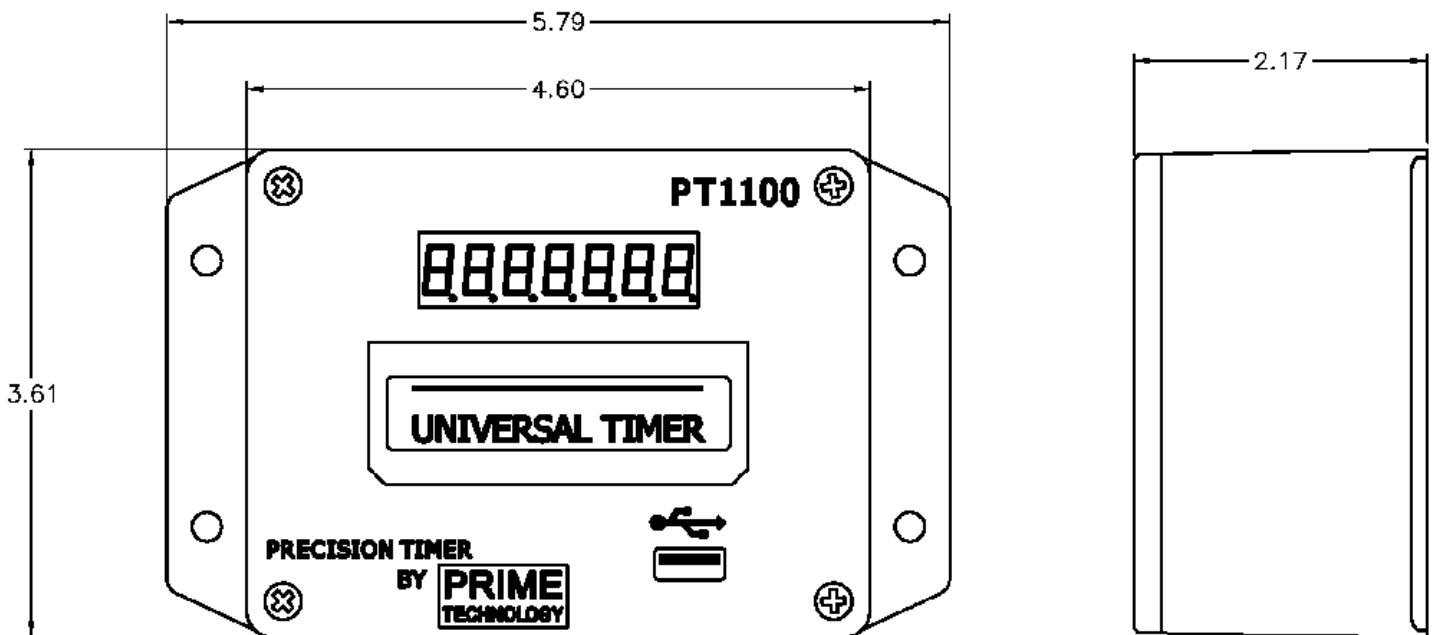

- On Delay Timer
- Off Delay Timer
- Interval Timer
- One shot Timer
- Recycle/Flasher Timer
- Percent Timer
- Retriggerable One shot Timer
- Event counter mode

This flexibility greatly simplifies the system engineering tasks of designing and supporting complex timing based applications

Features:

Choice of seconds, minutes, hours

- Unit setting up to 6 digits and decimal point
- Graphic LCD Display
- External interface connector
- External reset input
- 2 c type dry contacts max 8 Amps
- Operation from 115/230 VAC

### Contact Info:

Contact our office to speak with a member of our Prime Technology Engineering Team. We look forward to discussing your application and providing a unique solution to your requirements.
